International Journal of

CONTROL

The Theory of Process Control and Automation

UNIVERSITY OF HAWAII
LIBRARY

LIBRARY USE ONLY

Editor: J. THOMSON

Editorial Board:

France - -	Professor P. AIGRAIN
Holland - -	Professor H. B. G. CASIMIR
U.K. - -	A. T. FULLER
Germany -	W. KLEIN
U.S.A. - -	J. C. LOZIER
U.K. - -	Professor J. C. WEST

Volume IX. First Series

January 1969 to June 1969

CONTENTS OF VOL. IX. (Nos. 1-6)

(FIRST SERIES)

NUMBER 1—JANUARY

Page

Periodic cycles in integral pulse frequency modulation (IPFM) systems. By E. A. KING-SMITH, University of Michigan, U.S.A., and J. R. CUMPSTON, University of Melbourne, Australia 1

On the mean square approximation of a function with a linear combination of exponentials. By A. MARZOLLO, Department of Electrical Engineering, University of Trieste, Italy 17

Stability properties of discrete-continuous feedback control systems with signal dependent sampling. II. Stability concepts. By K. E. TAIT, School of Electrical Engineering, University of New South Wales, Sydney, Australia 27

A wide-range triangular waveform generator. By S. DAS and D. K. BASU, Computer Centre, Department of Electronics and Telecommunication Engineering, Jadavpur University, Calcutta 32, India 77

Moment equations of a stochastic system with two different random parameters. By N. G. F. SANCHO, Department of Mathematics, McGill University, Montreal 83

Functional analysis approach to optimal control problems with multiple constraints on the controlling function. By R. N. P. SINGH, Electrical Engineering Department, Indian Institute of Technology, New Delhi-29 89

Stability of linear stationary systems with time delay. By S. G. LOO, Department of Electrical Engineering, University of Newcastle, Newcastle, N.S.W., Australia 103

Sensitivity comparison of optimal controls. By P. KOKOTOVIĆ, J. HELLER and P. SANNUTI, Department of Electrical Engineering and Coordinated Science Laboratory, University of Illinois, Urbana, Illinois 111

Research note:

On the step response of all-pole third-order transfer functions. By S. N. RAO and R. HARIHARAN, Department of Mechanical Engineering, Indian Institute of Science, Bangalore 12, India 117

NUMBER 2—FEBRUARY

Stability properties of discrete-continuous feedback control systems with signal dependent sampling. III. Stability properties. By K. E. TAIT, School of Electrical Engineering, University of New South Wales, Sydney, Australia.. 121

Page

An optimal linear voltage regulator for power systems. By V. SURYANARAYANA, N. VISWANADHAM, V. V. S. SARMA and H. N. RAMACHANDRA RAO, Department of Electrical Engineering, Indian Institute of Science, Bangalore 12, India 159

A direct second-variational method for free-endpoint, free-time optimal control problems by Newton's method in function space. By L. PADMANABHAN and S. G. BANKOFF, Department of Chemical Engineering, Northwestern University, Evanston, Illinois 167

Fundamental properties of the impulse response of low-order linear systems. By J. M. BROWN and J. D. LAMB, Dynamic Analysis Group, University of Wales, Institute of Science and Technology 179

Lyapunov design of time-shared sampled-data control systems. By STEIN WEISSENBERGER, Department of Mechanical Engineering, University of Santa Clara, Santa Clara, California 205

Active RC synthesis using a voltage amplifier. By S. N. RAO, Department of Mechanical Engineering, Indian Institute of Science, Bangalore 12, India 213

A bibliography on the properties, generation and control system applications of shift-register sequences. By P. N. NIKIFORUK and M. M. GUPTA, Division of Control Engineering, University of Saskatchewan, Saskatoon, Saskatchewan, Canada 217

The use of time element to shape transfer functions of electrical networks. By A. G. J. HOLT and C. PULÉ, Department of Electrical Engineering, The Merz Laboratories, The University of Newcastle upon Tyne 235

NUMBER 3—MARCH

Time optimal control of second-order systems with transport lag. By B. C. RAGG and C. A. STAPLETON, School of Electrical Engineering, University of New South Wales, Sydney, Australia 243

Method of variation of parameters for overdamped non-linear systems. By I. S. N. MURTY and B. L. DEEKSHATULU, Department of Electrical Engineering, Indian Institute of Science, Bangalore 12, India 259

Direct method of synthesis using a new representation for servo systems. By EARL D. EYMAN, Department of Electrical Engineering, University of Iowa, Iowa City, Iowa 52240, and MIGUEL E. VALDEZ, Report Group, Stanley Consultants Inc., Muscatine, Iowa 52761 267

Optimal and sub-optimal control using an observer when some of the state variables are not measurable. By M. M. NEWMAN, Department of Engineering Mathematics, The Queen's University of Belfast 281

Sensitivity-state models for linear systems. By H. K. KESAVAN, I. G. SARMA and U. R. PRASAD, Electrical Engineering Department, Indian Institute of Technology, Kanpur, India 291

Page

Stability analysis of a model reference adaptive control system with sinusoidal inputs. By D. J. G. JAMES, Department of Mathematics, Rugby College of Engineering Technology, Rugby, England 311

Error covariance for a lagging filter of coloured noise. By A. P. ROBERTS, Department of Engineering Mathematics, The Queen's University of Belfast.. 323

A stepping system of automatic optimization involving lags and noise. By D. A. XIROKOSTAS, Public Power Corporation of Greece 329

A computational method for determining the stability region of a second-order non-linear autonomous system. By E. J. DAVISON, Department of Electrical Engineering, University of Toronto, Canada, and K. C. COWAN, Process Control Group, IBM, Toronto, Canada 349

Obtaining real solutions for non-linear systems using certain transformation techniques. By J. E. PRUSSING, University of California at San Diego, La Jolla, California 359

NUMBER 4—APRIL

Coincidence between Boolean products and its application to third-order simplification. By S. R. DAS and C. L. SHENG, The University of Ottawa, Department of Electrical Engineering, Ottawa, Canada 363

Limit cycles in time-delay relay systems. By B. E. BROOKES, Northern Electric Co. Ltd., Ottawa, Canada, and R. A. JOHNSON, Department of Electrical Engineering, University of Manitoba, Canada 387

Response optimization of feedback control systems with reference to single-time-constant ideal. By T. RAJAGOPALAN and V. SESHADRI, Indian Institute of Technology, Madras-36 399

An iterative procedure for the training of a two-layered machine. By C. CHITTI BABU and B. L. DEEKSHATULU, Department of Electrical Engineering, Indian Institute of Science, Bangalore 12, India 413

A modified transfer function obtained from the commutating contact of an N-path filter. By A. G. J. HOLT and C. PULE, Department of Electrical Engineering, University of Newcastle upon Tyne, England 425

On the general theory of optimal processes. By HSI-HAN YEH, Department of Electrical Engineering, University of Kentucky, Lexington, Kentucky, and JULIUS T. TOU, Department of Electrical Engineering, University of Florida, Gainesville, Florida 433

Evaluation of a linear system impulse response and its Fourier transform. By H. B. KEKRE, Department of Electrical Engineering, Indian Institute of Technology, Bombay 76 453

On the linear optimal servo problem. By ELIEZER KREINDLER, Research Department, Grumman Aircraft Engineering Corporation, Bethpage, New York 11714 465

Compensator design for dynamic optimization. By J. B. PEARSON, Department of Electrical Engineering, Rice University, Houston, Texas 473

Page

NUMBER 5—MAY

Synthesis of multiple loop feedback systems. Part I. By A. G. J. HOLT and J. I. SEWELL, Department of Electrical Engineering, University of Newcastle upon Tyne, England 483

Synthesis of multiple loop feedback systems. Part II. By A. G. J. HOLT and J. I. SEWELL, Department of Electrical Engineering, University of Newcastle upon Tyne, England 499

Posicast and negicast control systems. By N. G. NATH and A. K. CHOUDHURY, Institute of Radio Physics and Electronics, University of Calcutta, Calcutta 9, India 509

A predictive approach to the control of processes without *a priori* information. By G. R. CASSIR, Real-Time Research & Simulation Branch, I.C.T. Ltd., Brandon House, Bracknell, Berks, and D. GRAUPE, Department of Mechanical Engineering, Technion, Israel Institute of Technology, Haifa, Israel..... 535

Monte Carlo techniques to estimate the conditional expectation in multi-stage non-linear filtering. By J. E. HANDSCHIN and D. Q. MAYNE, Centre for Computing and Automation, Imperial College of Science and Technology, University of London, S.W.7..... 547

Eigenfunction sensitivity and the parameter variation problem. By D. C. REDDY, College of Engineering, University of Illinois at Chicago Circle..... 561

Game theoretic approach to minimum-effort control of second-order system. By SAHJENDRA N. SINGH, B. L. DEEKSHATULU and V. V. S. SARMA, Department of Electrical Engineering, Indian Institute of Science, Bangalore 12, India..... 569

A differential game problem—plant with zeros in transfer function. By SAHJENDRA N. SINGH, B. L. DEEKSHATULU and V. V. S. SARMA, Department of Electrical Engineering, Indian Institute of Science, Bangalore 12, India..... 577

Singular optimal control in the presence of uncertainty—a game theoretic approach. By SAHJENDRA N. SINGH, B. L. DEEKSHATULU and V. V. S. SARMA, Department of Electrical Engineering, Indian Institute of Science, Bangalore 12, India 585

Application of bifrequency phase equivalent reduction to system synthesis. By V. SESHADRI and C. ESWARAN, Department of Electrical Engineering, Indian Institute of Technology, Madras 36, India 597

NUMBER 6—JUNE

Analysis of nonlinear stochastic systems by means of the Fokker–Planck equation. By A. T. FULLER, Engineering Department, Cambridge University.. 603

A method of obtaining the dual-input describing functions for a periodic input. By ASIM K. SEN, Department of Electrical Engineering, University of Manitoba, Winnipeg, Canada..... 657

Page

An optimization problem in distributed parameter systems. By FERNANDO L. ALVARADO and RANGASWAMY MUKUNDAN, Department of Electrical Engineering, Clarkson College of Technology, Potsdam, New York 665

Stability of discrete systems over a finite interval of time. By A. N. MICHEL, Department of Electrical Engineering, Iowa State University, Ames, Iowa and S. H. WU, Department of Electrical Engineering, Marquette University, Milwaukee, Wisconsin 679

An analogue technique for solving trajectory optimization problems. By P. L. NEELY, Department of Electrical Engineering, The Queen's University of Belfast and A. P. ROBERTS, Department of Engineering Mathematics, The Queen's University of Belfast 695

Some differential equations of probability theory in stochastic processes and control systems. By VINCENT H. LARSON, Northwestern University, Evanston, Illinois 709

Subject index 723

Author index 725
